Spiritual Care for Dementia Patients

Case Study:
A 96 year old patient is diagnosed with debility unspecified and dementia.
She is an Italian Catholic who immigrated to America after WWII.
She resides in a memory care unit.

As the chaplain slowly approaches the patient – smiling – the patient frowns and says, “Where are my shoes? #!@*&!”
The patient begins to speak in Italian.
Spiritual Care for Dementia Patients

Case Study: An aide in the memory unit says to the chaplain, “She thinks you are her cobbler. She has been stuck on that all morning.”

July 2013

Spiritual Care for Dementia Patients

Case Study: The chaplain goes around the corner, out of sight of the patient. The chaplain again, slowly approaches the patient while smiling. This time the chaplain crosses himself when the patient looks at him.

July 2013

Spiritual Care for Dementia Patients

Case Study: The patient responds, “FATHER!” and smiles and greets the chaplain. The chaplain is able to sit with, give spiritual care to and pray with patient. The patient recites parts of the “Our Father” with the chaplain.

Spiritual Care for Dementia Patients

Why give spiritual care to demented patients?

Research indicates that the memory needed to explore one’s spirituality may be spared with the effects of dementia.

Spiritual Care for Dementia Patients

Some studies have found that people with probable Alzheimer’s who have higher levels of religiosity show slower rates of mental decline.

-- Paula Spencer Scott

“Procedural memory is resistant to the neurological damage caused by AD. Activities that use procedural memory can be used well into the later stages of dementia when activity therapy is more difficult to administer. This approach can be used to mitigate behavioral problems as well as increase the quality of life. Due to the flexibility of this therapy, it can be used within a variety of religious paradigms.”

-- D.E. Vance
Providing spiritual care for persons with dementia is often challenging owing to the high reliance on explicit, language-based, declarative memory in typical religious organizations. Pastoral care providers can break through this barrier of memory, in part, by a thoughtful and deliberate use of techniques related to implicit memory. This involves using another form of memory that is primarily unconscious, diffused, symbolic, affective and not language-based.

-- Gail and Richard Johnson

A study by: Coin A, Perissinotto E, Najjar M, Girardi A, Inelmen EM, Enzi G, Manzato E, Sergi G. found that: "higher levels of religiosity in Alzheimer's dementia seem to correlate with a slower cognitive and behavioral decline, with a corresponding significant reduction of the caregiver's burden."

In summary: Researchers find that implicit memory and procedural memory -- as well as the Music Center of the brain -- are resistant to the effects of dementia. This makes spiritual care effective with dementia patients.
Care Methods

Patients ….

• May remember routines
• Read non-verbal cues
• Detect kindness
• Know how they feel to be with you
• May make either/or choices

Care Methods

• Make short, frequent visits
• Approach from the front
• Move slowly
• Speak slowly and reassuringly
• Use low-pitched voice
• Identify yourself
• Maintain good eye contact

Care Methods

• Introduce one idea at a time
• Use short familiar words
• Use closed ended questions
• Try reminiscing
• Try using pictures or objects
• Take them outdoors
• Use gestures
Care Methods

• Use music
• Use symbol
• Be comfortable with silence
• Try showing affection
• Hold hands – palm up
• Be on their level
• Validate their statements

Spiritual Care Methods

Learn from their family

• Religious activities they liked
• Past rites and gestures
• Religious symbols

Spiritual Care Methods

Use visual faith gestures

• Sign of the Cross
• Hands in prayer
• Hands lifted up
**Spiritual Care Methods**

**Recite familiar expressions**

- Apostle’s Creed
- Our Father – Lord’s Prayer
- Hail Mary
- “Now I lay me down to sleep”
- Psalm 23, I Cor 13, 10 Commandments, Beatitudes -- KJV
- Memory verses
- Benediction

**Spiritual Care Methods**

**Recite familiar expressions**

- The patient may not recall any of what you recite
- The patient is likely to recall how they **FELT** whenever they used to hear what you are reciting

**Spiritual Care Methods**

**Utilize Music**

- Have family provide a hymnal
- Find out their favorite hymns
- Sing or recite hymns
- Collaborate with Social Worker regarding Music Therapy
- Joint visits with Music Therapist
Spiritual Care Methods

Utilize Objects

• Cross or Crucifix
• Rosary
• Icons
• Religious Art

They may want to hold objects

Utilize Rites

• Communion
• Anointing of the Sick
• Clerical Collar

Explore Memories of Church

• Church of Childhood
• Sunday School
• Facility
• Choir
Spiritual Care Methods

Explore Memories of Church

Sunday School Coloring Pages from their childhood

Pray
• Spirit
• Soul
• Immune to dementia
• Romans 8

Back to our Case Study:
The patient responds, “FATHER!” and smiles and greets the chaplain. The chaplain is able to sit with, give spiritual care to and pray with patient. The patient recites parts of the “Our Father” with the chaplain.
Spiritual Care Methods

How did the chaplain use some of the lessons we just learned?

Spiritual Care Methods

How have you been able to help dementia patients' spirituality in other ways?

How will you change what you do because of this class?

Spiritual Care for the Family

• Dementia impacts the entire family of a patient.
• We will explore appropriate ways for chaplains to help families cope with dementia.
  Consider the following:
Spiritual Care for the Family

Prayer is the most used “alternate therapy” of caregivers.

Spiritual Care for the Family

Care giving of dementia patients is often viewed as an opportunity for reciprocity.

Caregivers find emotional healing, offer forgiveness, and reconcile memories of parents.

Spiritual Care for the Family

Caregivers can develop a greater appreciation for the small things in life.
Caregivers must learn to integrate a theology of suffering.

Caregivers may suffer from guilt from wanting relief.

A Case Study:
The Patient is 93 years old, has advanced Alzheimer's Disease and lives at home. Her daughter was active in her Christian church until she quit her job and moved to Fort Myers to care for the patient. The siblings accuse the daughter of living off her mother.
Spiritual Care for the Family

How would you give spiritual care to the daughter who gave up her church, job and home to care for this patient?

Spiritual Care for the Family

How have these and other issues with caregivers arose in your experience?

How have you been able to help caregivers?

Spiritual Care for Dementia Patients and their Families

What if you became more effective in providing spiritual care to dementia patients and their families?

What would you need to learn more about?
What if we help each other provide more effective spiritual care for our dementia patients and their families? What must we do?
